

*Our healthcare solutions provide alternatives for medical centers and healthcare institutions to effectively manage their patient care processes through wayfinding, self-service check in and/or payment solutions for patients.*

*Our patient check-in systems utilize self-service technology that allows patients to easily check in for appointments while capturing relevant patient information, reducing the need for additional paperwork. The system reduces cost while creating a more efficient and positive experience for patients and their families.*

*Our payment systems facilitate the receipt of patient fees in various forms at healthcare institutions. Patients can use cash or debit/credit card payments for services received.*

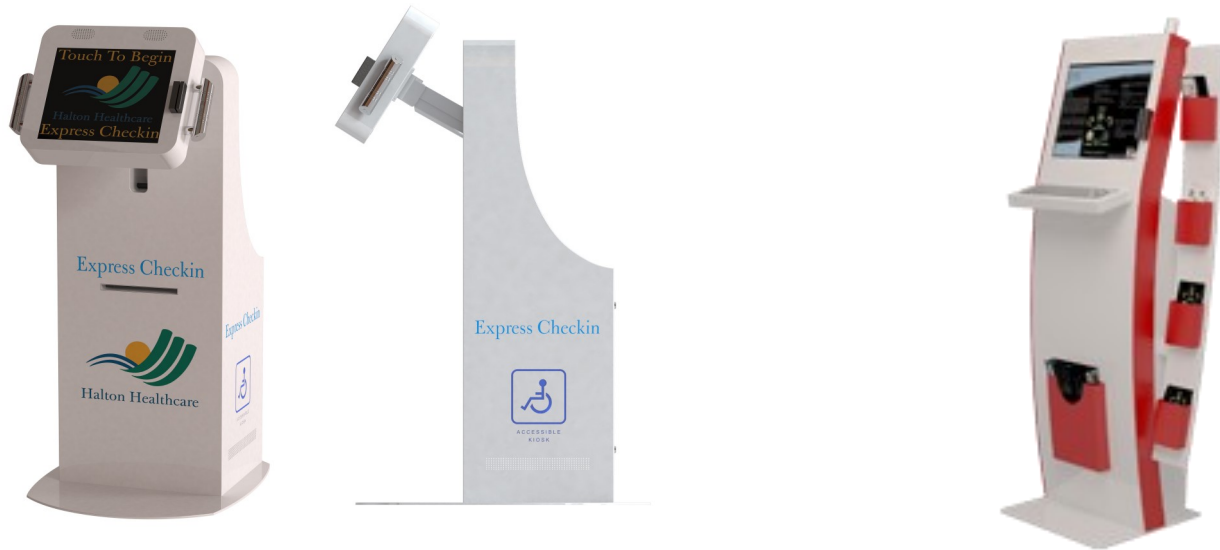

*Our wayfinding kiosks are interactive, allowing users to easily search company directories or navigate site maps. It can also double as an advertising platform when not being actively used for wayfinding.*
